

LJ7000 Series

Installation Instructions

- Installation by a qualified electrician is recommended.
- Isolate the electrical supply.
- Wall or ceiling mount only.
- If mounted vertically on a wall, the lamp socket should be at the bottom.
- With the supply cable through the grommet hole, fix the back plate to the mounting surface using 2 screws.
- Strip back the supply cable outer sheath 50mm and the inner sheath's 10mm.
- Fit the rubber grommet over the cable and heat sleeving over the Phase and Neutral wires.
- Connect the Phase (live) and Neutral wires to the lamp holder (Phase to lamp centre contact).
- Fit plastic lamp holder cover with 2 screws supplied.
- Note: For installations that may be subject to sprayed water, ensure that cable entry fixing screws are sealed. (Use silicon sealant if necessary).
- Fittings are double insulated. Do not use lamp wattages in excess to the maximum marked on the wattage label.
- Attach the diffuser and outer body with the stainless-steel screws provided.
