

Model: LX Series

Installation Instructions

IMPORTANT: Install using a Registered Electrician.

Wire Connections:

Isolate the electrical power supply

Connect cable to L to live, N to Neutral and E \equiv to Earth terminals.

Ensure that cable is sealed in rubber grommet, often a sealant is necessary.

Ensure body gasket is in place when re-assembly

If you wish to maintain the look of your exterior lighting please consider the following:

Expectation: Visual appearance and if to be kept looking as new or not?

Exposure: Vandalism, weather, contaminants?

Maintenance Costs: Monthly maintenance or annual maintenance?

Installation:

It is highly recommended that outdoor lighting fixtures are not installed until the building project, landscaping and finishing are complete. If earlier installation is unavoidable ensure that fixtures are wrapped and masked after installation. Muriatic Acid etching, caustic and other cleaners can destroy the finish.

Aluminium Fixtures:

Both product and maintenance costs have to be part of a balanced purchasing decision, few people like the 'flaking paint' look. Take care not to scratch or chip the paint when handling and installing. Painted fixtures should be washed with soapy water regularly. Moss and lichen can penetrate the surface of the paint film. The maintenance period will be extended if a car wax is applied.
