

LED Strip Light with Door Switches

Model: SLED-562-DDS

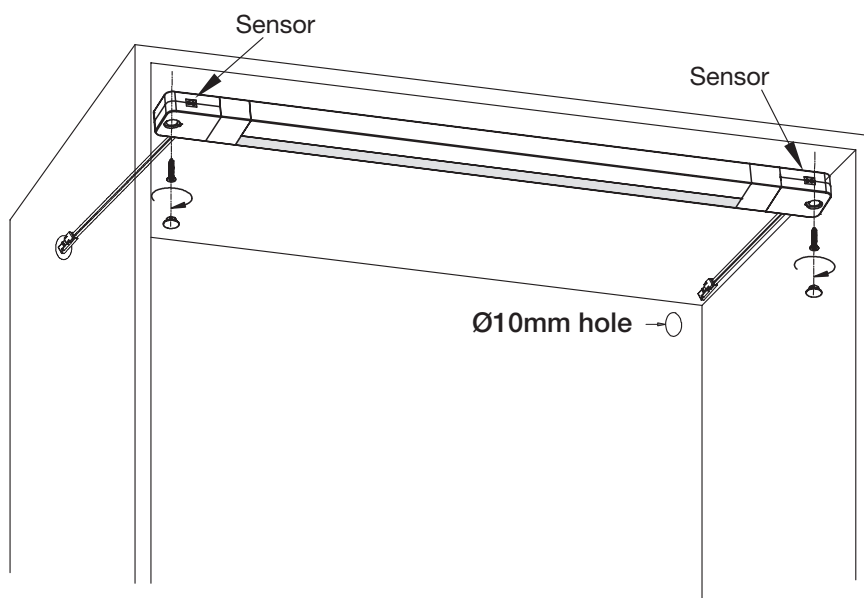

Installation instructions

Important: Installation should be undertaken by a registered electrician.

- Power supply 12V DC
- Use Superlux SLED driver
- Can be Installed in a single or double door cupboard

Function: When a door is moved within the 10cm detection range of both detectors at either end of the light fixture the light will switch 'off' until the object is removed. If Installed in a cupboard with double doors when either of the doors are opened the light will switch 'on'.

Ensure that the light fixture is installed within the 10cm detection range and is at least 5mm away from the cupboard door. Then Fix in place either directly using the two counter sunk holes in the fixture or by using the mounting brackets supplied. If required a 10mm hole can be made to feed the cables and plugs through to connect to the driver.
